Agenda

What is GAMS?

GAMS at a Glance

A simple Example

Interfacing with other Applications

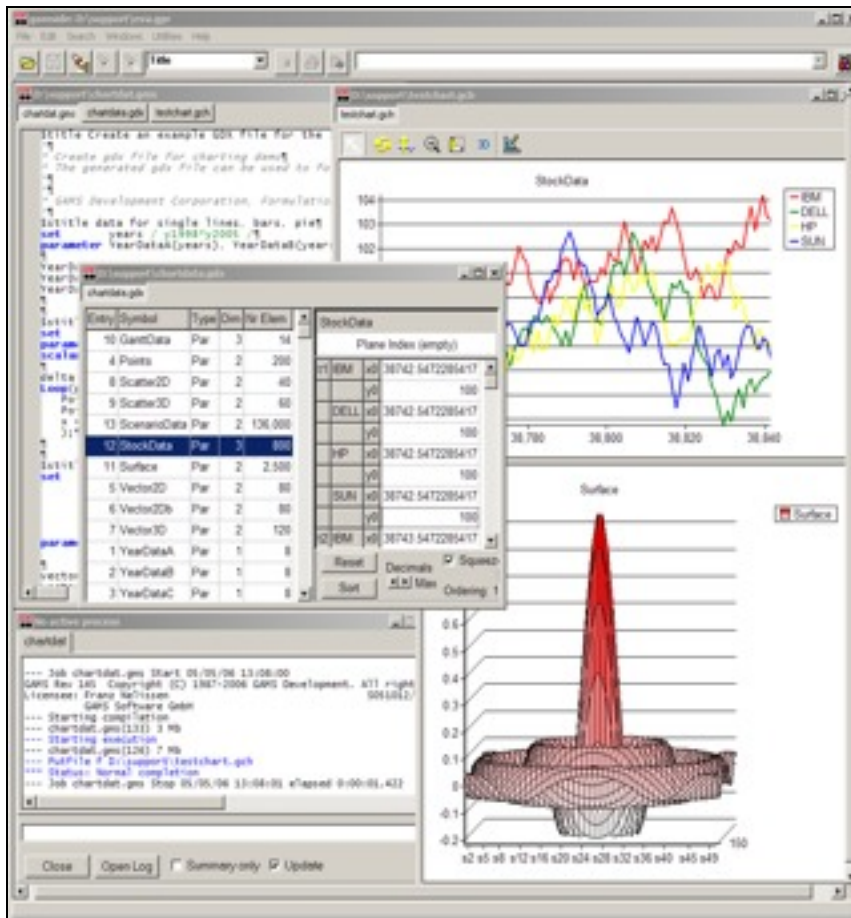

**What does this modeler
have to think about?**

- **Application**
- **Mathematics**
- **Computer Code**

**GAMS eases the transitions
between these domains.**

GAMS Development / Software at a Glance

- Roots: World Bank, 1976
- Went commercial in 1987
- GAMS Development Corp. (US)
- GAMS Software GmbH (Europe)
- Technical tool provider (Software)
- Broad academic & commercial user community and network
 - GAMS is used in more than 120 countries
 - Half of licenses commercially used

Broad Academic and Commercial Network

5177 visits from 19 Mar 2012 to 26 Mar 2012

⌘ distance in which individuals are clustered
Total number of visits depicted above = 4275

Dot sizes:

● = 1000 + ● = 100 - 999 ● = 10 - 99 ● = 1 - 9

Downloads (March 2012)

Download GAMS Distribution 23.8.1 - March 17, 2012

Note: To deliver GAMS with the best performance we are using the [Amazon CloudFront](#) web service, a global network of edge locations for content delivery.

Microsoft Internet Explorer users who have enabled SmartScreen Filter may get several warnings during the download of a GAMS system. If you do not want to ignore these in please cancel the download and download the current version for [Windows 32 bit](#) or [Windows 64 bit](#) as a zip file and unzip this file before running the setup program.

Please consult the [release notes](#) before downloading a system. The installation notes for [Windows](#) and [UNIX](#), and the complete [system documentation](#) are included in any system.

Windows

[Windows 32 bit](#) Windows 7, Windows Vista, Windows XP, Windows Server 2008, Windows Server 2003, and compatible on AMD- or Intel-based (x86_32) architectures

[Windows 64 bit](#) Windows 7 x64, Windows Vista x64, Windows Server 2008 x64, Windows Server 2003 x64, and compatible on AMD- or Intel-based (x64_64) architectures

Unix

[AIX](#) AIX 5.1 or higher, PowerPC chip, 64 bit (ppc_64)

[Linux 32 bit](#) AMD- or Intel-based 32-bit Linux systems. The software was built with the GNU Compiler Collection (GCC) toolset, ver 4.4 or higher.

[Linux 64 bit](#) AMD- or Intel-based 64-bit Linux systems (x86_64). The software was built with the GNU Compiler Collection (GCC) toolset, ver 4.4 or higher.

[Mac OS X Intel 32 bit](#) Macintosh Intel-based systems (x86_32) built on Darwin 10.4 (Snow Leopard). Please note that this is a Mac OS X Terminal application and must be installed executed using the command line interface. [Additional Information](#)

[Mac OS X Intel 64 bit](#) Macintosh Intel-based systems (x64_64) built on Darwin 10.4 (Snow Leopard). Please note that this is a Mac OS X Terminal application and must be installed executed using the command line interface. [Additional Information](#)

[Solaris SPARC 32 bit](#) Solaris 2.8 or higher on SUN Sparc (sparc_32). Missing [Fortran Run-Time Environment](#)

[Solaris SPARC 64 bit](#) Solaris 2.8 or higher on SUN Sparc (sparc_64)

[Solaris x64 64 bit](#) Solaris 11 or higher on AMD- or Intel-based 64 bit (x64_64)

Wise

[Linux Wise \(32 bit\)](#) AMD- or Intel-based Linux systems. The software uses the Windows 12bit GAMS build and [Wise](#). No separate Wise installation is required. For more info please visit [this page](#).

Please also visit the information about the [distributions history](#), [changes](#), and [accounting updates](#). For older distributions please follow [this link](#). There are some [mailing lists](#), which you should be following releases, provide additional information, and are useful for questions about GAMS and modeling issues.

Agenda

What is GAMS?

GAMS at a Glance

A simple Example

Interfacing with other Applications

GAMS at a Glance

- Balanced mix of declarative and procedural elements
- Platform independence
- Hassle-free switch of solution methods
- Open architecture and interfaces to other systems
- Independent layers

GAMS at a Glance: Balanced mix..

Balanced mix of declarative and procedural elements

- Algebra (Expressions): model equations
- Relational Algebra (SQL) for data manipulation

Mathematical Notation

Notation in GAMS

$$\sum_{\substack{c,p: \\ (c,p) \in \mathcal{N}}} tcost \cdot dist(c,p) \cdot x_p^c \rightarrow \min$$

$$\sum_{\substack{c,p: \\ (c,p) \in \mathcal{N}}} x_p^c \leq sup(c) \quad \forall c$$

$$\sum_{\substack{c,p: \\ (c,p) \in \mathcal{N}}} x_p^c \geq dem(p) \quad \forall p$$

$$x_p^c \geq 0 \quad \forall c,p : (c,p) \in \mathcal{N}$$

```

C:\work\gdorw\transport.gms
transport.gms  transport.lst

Equations
  cost          define objective function
  supply(i)     observe supply limit at plant i
  demand(j)     satisfy demand at market j ;

cost ..        z =e= sum((i,j), c(i,j)*x(i,j)) ;

supply(i) ..   sum(j, x(i,j)) =l= a(i) ;

demand(j) ..   sum(i, x(i,j)) =g= b(j) ;

Model transport /all/ ;

Solve transport using lp minimizing z ;

Display x.l, x.m ;
    
```

GAMS at a Glance: Balanced Mix..

Balanced mix of declarative and procedural elements

- For

```
scalar scen;  
for(scen=1 to 10 by 0.5,  
    f      = 10*scen;  
    c(i,j) = f * d(i,j) / 1000;  
    Solve transport using lp minimizing Z;  
    Display Z.1;);
```

- Loop/If

```
loop(h,  
    if(work(h),  
        pay(i,h) = 0.6*pay(i,h);  
    else  
        pay(i,h) = 1.5*pay(i,h);  
    );  
);
```

- While

```
Scalar scen /1/;  
while(scen<=10,  
    f      = 10*scen;  
    c(i,j) = f * d(i,j) / 1000;  
    Solve transport using lp minimizing Z;  
    scen = scen + 0.5;  
);
```

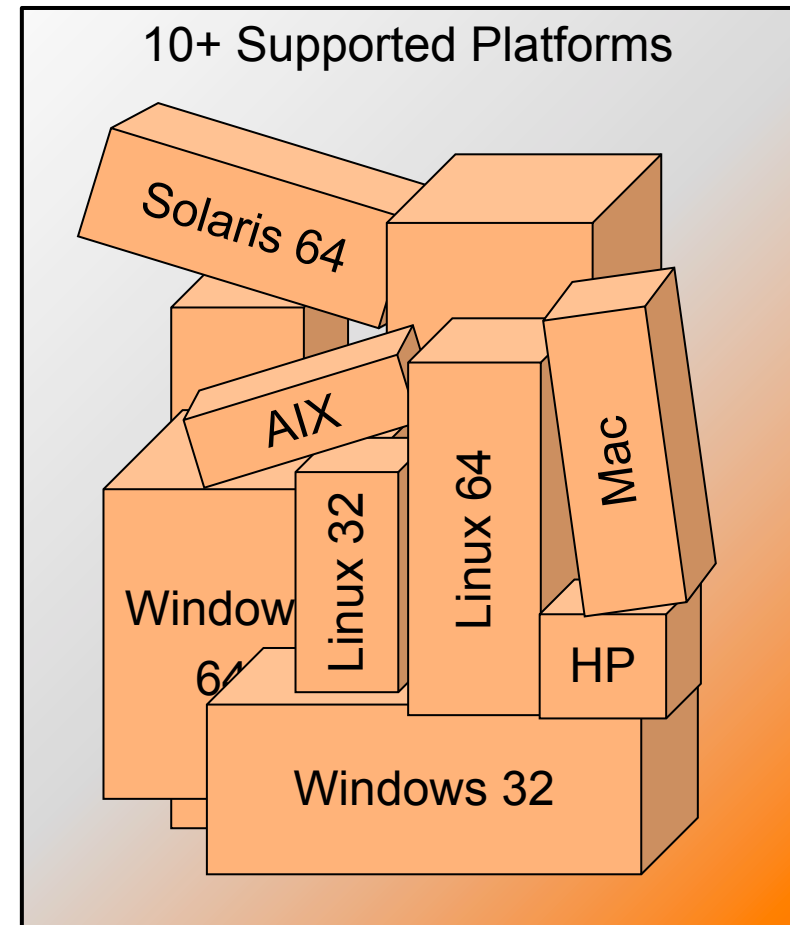

- Macros

- User defined function libraries

GAMS at a Glance

- Balanced mix of declarative and procedural elements
- **Platform independence**
- Hassle-free switch of solution methods
- Open architecture and interfaces to other systems
- Independent Layers

GAMS at a Glance

- Balanced mix of declarative and procedural elements
- Platform independence
- **Hassle-free switch of solution methods**
- Open architecture and interfaces to other systems
- Independent Layers

GAMS at a Glance

- Balanced mix of declarative and procedural elements
- Platform independence
- Hassle-free switch of solution methods
- **Open architecture and interfaces to other systems**
- Independent Layers
 - ASCII
 - Gams Data eXchange (Binary)
 - MS Excel, Access
 - Databases
 -
 - API's
 - Component Libraries
 - .NET Integration

GAMS at a Glance

Independence of

- Model and data
- Model and solution methods (solver)
- Model and operating system
- Model and user interface

Interface

Data

Model

Solver

→ Models benefit from

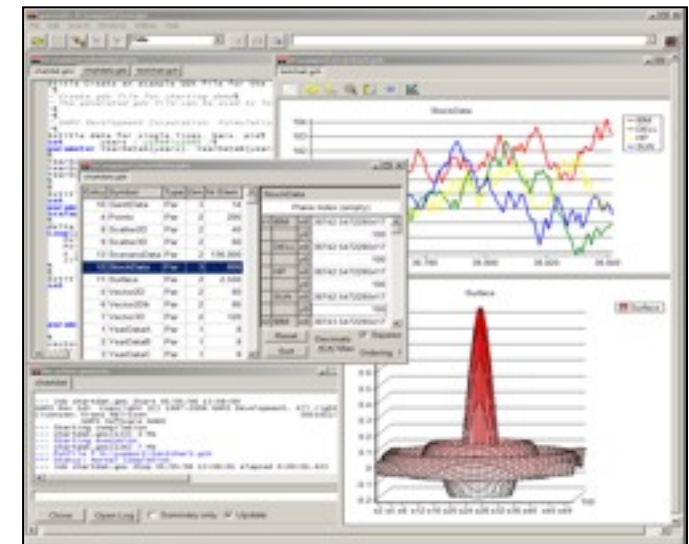

- Advancing hardware
- Enhanced / new solver technology
- Improved / upcoming interfaces to other systems

GAMS at a Glance: Development Environm.

GAMS IDE

- Project management
- Editor / Syntax coloring / Spell checking
- Launching and monitoring of (multiple) GAMS processes
- Listing file / Tree view / Syntax-error navigation
- Solver selection / Option selection
- GDX viewer
 - Data cube
 - Data export (e.g. to MS Excel)
 - Charting facilities
- Model libraries
- Documentation

Agenda

What is new?

GAMS System

Platforms

Solvers

Interfaces

Stochastic Programming

What is new: GAMS System

- Support for user-defined
 - Macros
 - Function libraries
 - External equations
- Asynchronous execution
- Extended Mathematical Programming (EMP)
- More and further details: <http://www.gams.com/docs/release/release.htm>

What is new: Asynchronous Execution

- `$Call / Execute / put_utility 'Exec':`
Start jobs from GAMS

- Three ways to start a job asynchronously,
 - at compile time (CT):
 - `$Call.ASync ...`
 - at execution time (ET):
 - `Execute.Async '...';`
 - `put_utility 'Exec.ASync' / '...';`

What is new: Platforms

- Support for MAC OS X
- Cross- platform licenses
- Wine (Linux, Mac)

What is new: Solvers

- GloMIQO: Branch-and-bound global optimization for mixed-integer quadratic models
- Lindo: Global and stochastic optimization
- Gather-Update-Solve-Scatter
- *(Stochastic) EMP*

What is new: Gather-Update-Solve-Scatter

Setting	Solve time (secs)
Solverlink=0 (default)	40.297
Solverlink=%Solverlink.LoadLibrary%	03.625
GUSS	00.797

- Updates model data instead of matrix coefficients/rhs
- Hot start (keeps the model hot inside the solver and uses solver's best update mechanism)
- Saves model generation and solver setup time
- Model unchanged from scenario to scenario
- A priori knowledge of all scenario data

What is new: Solving Data Related Models

The common way:

```
Set s / s1*s10 /
```

```
Parameter
```

```
    A_s(s,i,j) Scenario data
```

```
    xlo_s(s,j) Scenario lower bound for variable x
```

```
    xl_s(s,j) Scenario solution for x.l
```

```
    em_s(s,i) Scenario solution for e.m;
```

```
Loop(s,
```

```
    A(i,j) = A_s(s,i,j);
```

```
    x.lo(j)= xlo_s(s,j);
```

```
    solve mymodel min z using lp;
```

```
    xl_s(s,j) = x.l(j);
```

```
    em_s(s,i) = e.m(i);
```

```
);
```

- GAMS generates model and writes it to hd
- GAMS writes database to scratch files on hd
- GAMS calls solver and vacates memory
- After solver is done: GAMS restarts and swaps database

What is new: Solving Data Related Models

The new way:

```
Set s / s1*s10 /
```

```
Parameter
```

```
    A_s(s,i,j) Scenario data
```

```
    xlo_s(s,j) Scenario lower bound for variable x
```

```
    xl_s(s,j)  Scenario solution for x.l
```

```
    em_s(s,i)  Scenario solution for e.m;
```

```
Set dict / s.    scenario.  ''
```

```
        A.    param.    A_s
```

```
        x.    lower.    xlo_s
```

```
        x.    level.    xl_s
```

```
        e.    marginal. em_s  /;
```

```
solve mymodel min z using lp scenario dict;
```

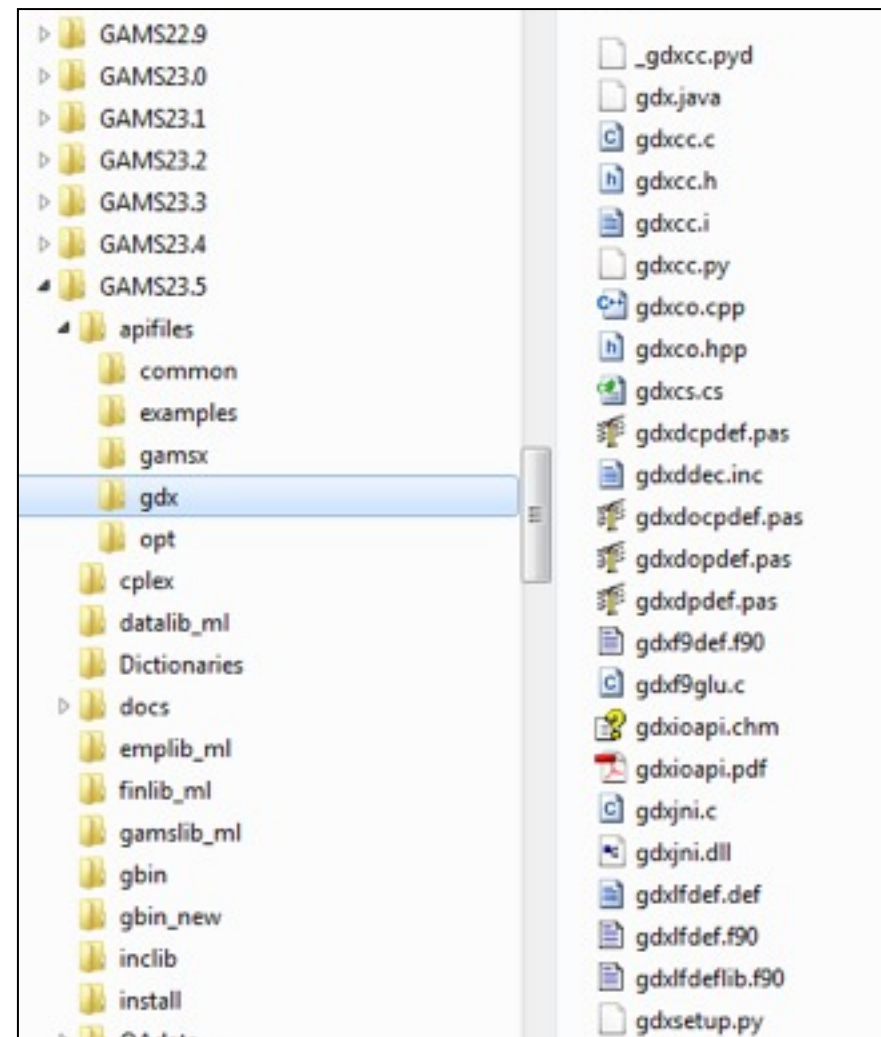

What is new: Interfaces

- API's for various programming languages (C, Fortran, Delphi)
- Component libraries
- Better integration into Python

What is new: Distributed GAMS APIs

- Component Libraries
 - GAMS
 - GDX
 - Option
- Supported languages
 - C, C++, C#
 - Delphi
 - Fortran
 - Java
 - VBA, VB.Net
 - Python
- Examples/Documentation

What is new: GAMS Component Libraries

Firefox

http://interfaces.gams-software.com/doku.php?id=gams_component_libraries

gams_component_libraries [GAMS Inte...]

Application Programming Interfaces (APIs)

- GAMS Dictionary Object (DCT)**
 - DCT API documentation
- GAMS Execution Object (GAMSX)**
 - GAMSX API documentation
- GAMS Data Exchange Object (GDX)**
 - GDX API documentation
 - System and Reference Manual (pdf) (chm)
- GAMS Environment Object (GEV)**
 - GEV API documentation
- GAMS Modeling Object (GMO)**

What is new: Calling GAMS from Python

```
if __name__ == "__main__":  
  
    numberParams = len(sys.argv)  
    if numberParams != 2 :  
        print "Usage:", sys.argv[0], "sysDir"  
        os._exit(1)  
  
   .gdxHandle = new_gdxHandle_tp()  
    .optHandle = new_optHandle_tp()  
    .gamsxHandle = new_gamsxHandle_tp()  
  
    sysDir = sys.argv[1]  
    print sys.argv[0], "using GAMS system directory:", sys.argv[1]  
  
    assert gamsxCreated(gamsxHandle, sysDir, GMS_SSSIZE)[0]  
    assert gdxCreated (gdxHandle, sysDir, GMS_SSSIZE)[0]  
    assert optCreated (optHandle, sysDir, GMS_SSSIZE)[0]
```

```
from gdxcc import *  
from gamsxcc import *  
from optcc import *  
import sys  
import os
```

```
status = writeModelData(gdxHandle, "demanddata.gdx")  
if not status:  
    print("Model data not written")  
    terminate(gdxHandle, gamsxHandle, optHandle)
```

Creating Input for GAMS Model

```
status = callGams(gamsxHandle, optHandle, sysDir)  
if not status:  
    print("Call to GAMS failed")  
    terminate(gdxHandle, gamsxHandle, optHandle)
```

Callout to GAMS

```
status = readSolutionData(gdxHandle, "results.gdx")  
if not status:  
    print("Could not read solution back")
```

Reading Solution from GAMS Model

```
terminate(gdxHandle, gamsxHandle, optHandle)
```

What is new: .Net Integration

```
Transport8.cs  Transport7.cs  Transport6.cs  Transport5.cs  Transport4.cs  Transport3.cs  Transport2.cs  Transport1.cs x
Toolbox
TransportSeq.Transport1
Main(string[] args)

using System;
using System.Collections.Generic;
using System.Text;
using GAMS;

namespace TransportSeq
{
    class Transport1
    {
        static void Main(string[] args)
        {
            GAMSWorkspace ws = new GAMSWorkspace();
            ws.Gamslib("transport");
            using (GAMSJob t1 = ws.AddJobFromFile("transport.gms"))
            {
                t1.Run();
                Console.WriteLine("Run with Default:");
                foreach (GAMSVariableRecord rec in t1.OutDB.GetVariable("x"))
                {
                    Console.WriteLine("x(" + rec.Keys[0] + ", " + rec.Keys[1] + "): level=" + rec.Level + " marginal=" + rec.Marginal);
                }

                using (GAMSOptions opt = ws.AddOptions())
                {
                    opt.AllModelTypes = "xpress";
                    t1.Run(opt);
                }
                Console.WriteLine("Run with Xpress:");
                foreach (GAMSVariableRecord rec in t1.OutDB.GetVariable("x"))
                {
                    Console.WriteLine("x(" + rec.Keys[0] + ", " + rec.Keys[1] + "): level=" + rec.Level + " marginal=" + rec.Marginal);
                }
            }
        }
    }
}
```

Agenda

What is new?

GAMS System

Platforms

Solvers

Interfaces

Stochastic Programming

Stochastic Programming Claims and '*Facts*'

- Lots of application areas (Finance, Energy, Telecommunication)
- Mature field (Dantzig '55)
- Variety of SP problem classes with specialized solution algorithms (e.g. Bender's Decomposition)
- Small fraction compared to deterministic mathematical programming (NEOS)
- Few commercially supported solvers for SP
- Various frustrations with industrial SP projects

Extended Mathematical Programming

- Embedded Complementarity Systems
 - Disjunctive Programs
 - Bilevel Programs
 - Extended Nonlinear Programs
 - Stochastic Programming
 - ...
-
- Breakouts of traditional MP classes
 - No conventional syntax
 - Limited support with common model representation
 - Incomplete/experimental solution approaches
 - Lack of reliable/any software

Thank You !
